

Anthony G. Teslenko

Chicago, IL, USA | teslenkoanthony@pm.me | (224) 425-1688

SUMMARY

Business Operations professional with a track record of building automation systems that eliminate manual workflows, from a self-founded consultancy to scaling process infrastructure at a high-growth tech company. Combines hands-on technical build skills (Python, LLM tooling, Zapier/N8N) with engineering-honed project management and cross-functional leadership from prior work at Boeing.

EXPERIENCE

Founder

Ushiro Labs (Business Operations Consultancy)

October 2025 — Present, Remote, US

- Founded and operate a boutique automation consultancy serving SMB clients, designing end-to-end systems across client intake, contract workflows, and file management that eliminate manual work and produce measurable efficiency gains for each engagement.
- Designed and implemented a fully automated intern-selection pipeline for a Chicago emergency veterinary hospital: aggregated evaluations from 10+ physicians, summarized written feedback via a python script calling a Locally hosted LLM, averaged candidate scores, and generated ranked output for all 40+ applicants, reducing a multi-day manual process to minutes.
- Overhauled backend operations for a wedding planning firm: audited and restructured their file management system, optimized their website for conversion, and built a zero-touch proposal pipeline that auto-populated contracts from an inbound inquiry channel (website, Instagram, Facebook), routed approvals, and triggered automated sends, saving 3+ hours per client inquiry.
- Delivered measurable time savings across the client portfolio, averaging 5+ hours saved per process optimization, freeing capacity for service fulfillment and repeat engagements.

Business Operations Generalist

Flashbots

June 2025 — October 2025, Remote, US

- Partnered with the board of directors to redesign equity-options governance; audit findings surfaced discrepancies between theoretical and actual grant awards and flagged cap-table health risks, directly informing governance policy changes.
- Automated quarterly option grant generation, cutting manual workload and errors by 90% and expediting board approvals.
- Built a Notion-based operations hub centralizing documentation, tools, and workflows for team efficiency; scaled process documentation from <10 to 60+ standardized workflows across the operations division.
- Audited internal software and services spend, identifying and eliminating 8 redundant subscriptions/tools, cutting annual software spend by \$8,000
- Owned data room document collection for the company's Series C fundraise, ensuring over 20 documents were audit-ready with zero errors flagged by counsel/investors.

Structure & Payload Design Engineer

The Boeing Company - Boeing Defense, Space, & Security

May 2023 — April 2025, Huntsville, AL

- Directed procurement and installation of rocket hardware, driving alignment with technical specifications and budget constraints, resulting in a 30% reduction in lead times.
- Led a team of 15 part-time college students, managing task delegation, timelines, and engineer coordination while overseeing funding and maintaining efficient resource allocation within budget constraints.
- Directed a six-month cross-functional initiative across engineering, procurement, and quality teams to design a new protective sensor component, resolving a critical reliability failure mode ahead of launch and cutting installation time by up to 25%.

PROJECTS

AI Meeting Notetaker

November 2025

- Built a self-hosted AI meeting assistant (Whisper + Qwen2.5) that auto-generates per-speaker transcripts and structured summaries, eliminating manual note-taking for 10 hours per week

Small Unmanned Aerial System

January 2023 — December 2023

- Led a 13-engineer team through design, prototyping, and production of a small Unmanned Aerial System with a mothership and two deployable drones, delivered ahead of schedule and 10% under budget.

SKILLS

Automation & AI: Zapier | N8N | Python | AI/LLM Tooling | Vibe-Coding

Productivity & Collaboration: Notion | Slack | Google Suite | Microsoft Office | Linear | Project Management Software

Interpersonal: Russian (Fluent) | Leadership | Strategic Operations | Process Optimization | Cross-Functional Coordination

EDUCATION

Bachelor of Science in Aerospace Engineering

Iowa State University • Ames, IA
